

AGENDA for Triad 2.

Sites to be discussed on 7/5:

- • **UST1769:** Initial SI investigation of the suspected diesel UST was conducted during the 2010 field season. We will discuss the results of sampling in the vicinity of the subsurface anomaly identified by the 2010 geophysical survey.
- **OWS1833:** Initial SI investigation of the OWS was conducted during the 2010 field season. We will discuss the results of step-out sampling conducted to delineate the extent of TCE in soil.
- **S1850:** Initial SI investigation of the storage yard was conducted during the 2010 field season. We will discuss the results of step-out sampling south of S1850_GP004 which was intended to delineate the vertical extent of the TCE exceedance in the 3-5 ft bgs interval.
- **ST009:** A SC investigation of the site was conducted in 2010. Step-out sampling to the south and west was conducted until the only remaining exceedances of screening levels were lower level benzene detections deeper in the smear zone. Further step-out sampling to the east was deferred to the investigation at SS014/SS017/SS021. We will discuss the results of step-out sampling to delineate the extent of contamination north of the site.

Per Win's standing meeting request for the Triad Calls, the agenda will generally follow:

1. Status update for field work activities
2. Review of action items and conclusions from previous Triad meeting. Approval of minutes.
3. Discussion of new site data and evaluating progress towards Work Plan objectives.
4. Identifying additional work needed and/or concurrence that Work Plan objectives have been met.
5. Open discussion for other items
6. Schedule update for upcoming activities
